Re-defining Libraries (Repositories)

AN OPEN-SOURCE, OPEN-STANDARDS SOLUTION TO **CAPTURE, STORE, INDEX, DISTRIBUTE, PRESERVE** SCHOLARLY WORKS IN ANY DIGITAL FORMAT

(TXT, ODT-DOC, PDF, JPEG, MPEG, TIFF and any other format)

Electronic resource management is becoming an increasingly important role for organizations/libraries. The type of documents include both, born digital and documents for which the organizations/libraries have responsibilities to digitize and preserve them. To provide excellent tools for instant access through powerful search engine with preservation mechanism, DSpace is one such software which builds up Digital Asset Management System (DAMS) for academic, non-profit, and commercial organizations. It is the most widely used DAMS with more than 1,000 installations worldwide representing a growing and active user community.

The most common use of the DSpace software is by academic and research libraries as an open access university repository for managing faculty and student output. There are also many organizations using the software to host and manage subject based, dataset or media-based repositories.

Dspace, jointly developed by the MIT Libraries and Hewlett-Packard Company, is freely available under the BSD license, in over twenty languages.

DSPACE On Cloud

FEATURES

CAPTURES
- Digital research material in any format
- Directly from faculty or their designate
- Large-scale, stable, managed long-term storage

DESCRIBES
- Descriptive, technical, rights metadata
- Persistent identifiers

BUILT-IN WORKFLOWS

TOOLS-PLUGINS

Batch import/export, batch metadata editing, curation and object backup & restoration tools.

SECUTIRY
- Comes with an authorization stack
- Can also connect with LDAP or similar existing protocols
- Allows to control permissions as granular as item level, or set global permissions based on communities and collections

DISTRIBUTES
- Via WWW, with necessary access control
- Persistent identifiers
- Expose to Web search engines
- Alert Services
- E-mail notifications

PRESERVES
- Many approved digital formats

BUILT-IN SEARCH-ENGINE

OAI-PMH/SWORD/WebDAV

Complies with standard protocols for access, ingest and export

METADATA

Qualified Dublin Core is the default metadata scheme. Also accepts custom metadata schemas similar to Qualified Dublin Core. Can also translate metadata from other metadata schemas such as MARC/MODS.

SOME REASONS FOR USING DSPACE: • Largest community of users and developers worldwide • Free & Open Source software • Completely customizable to fit your needs • Used by educational, government, private, and commercial institutions • Manage and preserve all types of digital content: text, images, moving images, mpegs, datasets • Easily installed “out-of-the-box”

Organizations such as Universities, Museums, Research-labs, Government agencies, and Commercial Institutions are using DSpace to create their own digital libraries, and share their digital artifacts, documents, collections, and research with the world.

2cqr

COMPANY **PROFILE**

We 2CQR offer solutions that fit seamlessly into the Environment. Whether you use RFID or barcodes your STOCK can be made available 24/7 and returns dropped off at one of our automated units – even if the building is closed. Using RFID to return items is both simple for your users and more reliable for your staff as items can be sorted into any of 255 categories for re-shelving, reservation or disposal.

2CQR specialists in library offer software, products and services for libraries of all kinds.The concept of a "library" has practically disappeared and the modern learning environment is as much virtual as tangible. On campus the challenge is to create unrestricted learning spaces where interaction with physical resources is made as simple as possible. In an increasingly "virtual" learning environment RFID offers the opportunity for readers to interact with the physical assets too.
